

Deb

Carverowens

\*Deb CarverOwens Bio

When she was young, her imagination was vivid. She could look at the cracks in the walls and see ugly faces in the designs, see faces in the wallpaper patterns, and see faces when she closed her eyes at night. Don't ask me why she saw them. This was never made known to her to this day; however, her imagination has stayed with her all these years.

Science fiction is one of her favorite genres to read and watch on tv and movies. When she started reading novels, she read the historical romances. She also has a liking for history, the farther back, the better.

While reading the novels, she started to notice the patterns of plots and the chapter sequences. What came to mind was, "I can do this." She got in contact with one of her favorite authors and asked them to make a review of one of the first books she wrote. They suggested that she buy a book called "How to Write a Novel Using the Snowflake Method" by Randy

Ingermanson. She took their advice and read the book repeatedly. Oh, what insights were absorbed.

Now she has four full-length science fiction novels, several articles and editorials, and a short humorous story about fishing.

\*Press Release

Deb CarverOwens Has Released Black Seven: Legend of Venetta.

Three Brave Women on Three Different Planets from Three Different Time Periods All Endangered by One Cataclysmic Machine.

Foley, Alabama February 5, 2026, Deb CarverOwens has released her science fiction novel Black Seven: Legend of Venetta at several different venues. The adventure tells the story about

Makayna, Venetta, and Mallory. How can one machine terrify so many varying creatures? When the details of the threat are revealed, there can only be one solution. This account shows a terrifying look into what could possibly happen if certain imaginings were to come true.

Makayna is a scientist from the planet of Kanah who is traveling to Kanah's sister planet Vallour to show her findings from the simulations she ran to the others on the science team. It is imperative that she make them understand the danger they are all in. The other scientists are conducting an invaluable experiment that will keep Kanah with power to run their planet for an endless period of time. The Energy Extractor will go to the planet's core and there insert itself to extract the energy.

In 1509 AD, Venetta goes with the other women of her tribe, which is in the great lakes area of Earth, to the annual autumn hunt to find provisions for the winter. As they near one of the lakes, there is a severe lightning storm that incapacitates her people. She runs into a cave that has appeared in the forest. As she is contemplating a strange symbol on the back of the cave, she sees a bright light out of the corner of her eye.

A very tall man appears with a long neck and large round black eyes wearing a robe that extends to his bare feet. His arms are long and he has five fingers on his hands. He speaks to her and then takes her away in a flash of light to Kanah. The transport light is not a new idea, however the concept of the idea of it is titillating to the imagination.

Mallory is on a break from her college classes in the summer of 2009 AD and decides to go for a ride in the countryside of her city of Manistee, Michigan. As she is driving, she sees a cave appear by the side of the road. She stops her car and approaches the cave to investigate. On the inside she finds writing on the walls of the left and right sides of the cave. Writing that she can't understand. She looks at the back of the shallow cave and sees a black metal seven with round silver buttons on each corner of the number.

The story enhances the prospect of what could happen if scientists developed such a machine and were running on errant assumptions. The idea is sound when it comes to extracting energy from a core but raises other questions. What materials would be used so that the Energy Extractor would not disintegrate when it reached the core of the planet? What type of mechanisms inside the device would be made of? What size should the Energy Extractor be in ratio to the size of the planet? In Mallory's time, the

Earth finds itself having to battle the despot who rules Kanah with an iron fist. She enlists the help of her grandfather,

Charles, a retired four-star general to figure what can be done after they are visited by Rajene and Adella, two aliens from Kanah. With the help of General Cormack, they set up a perimeter around the cave.

When the battle comes, it takes place on Kanah with Adella leading a troop of Earth soldiers. After the tyrant is defeated, the troop comes back to Earth and trade is arranged, especially of technology.

The adventure is an imaginary tale that has just a little bit of suggestion for something that could, in the far future, be used here to quell the energy crises that have developed on Earth.

"The difference between the almost right word and the right word is really a large matter — it's the difference between the lightning bug and the lightning.": Mark Twain.

# Black Seven: Legend of Venetta

Deb CarverOwens

\*Author Q & A

Q. When did you start writing?

A. I started writing in 1990 when the Poems to the Lord Notebook was copywritten.

Q. What was your first book?

A. The first book completed was Black Seven: Legend of Venetta which was finished in 2015.

Q. How many works do you have now?

A. There are four Science Fiction Novels, one Nonfiction, two books of poetry (one Christian, one secular), two editorials, one article, and one short story.

Q. How long do you intend to continue writing?

A. That is not a hard decision; either until the Lord comes back or I go by the way of the grave is how long I would like to keep writing.

Q. Which genre did you first start reading?

A. The first books read were historical romance, the farther back in time the better.

### \*Facts About the Books

- The four main books were written around the same time in 2015. The inspiration came from a dream in which as I lay on my pillow, my head was opened, and all these words were poured into the top. It took one to two months to get the words all organized.
- After they were written, seven years passed while the books were edited and revised to be exactly the way I wanted them to be.
- The first one was published on June 16, 2021, on

Amazon. The book was (you guessed it) Black Seven:

Legend of Venetta. The following year, the trilogy came out which consists of Saga of Bazor the Hunt,

Saga of Bazor Guardian of Secrets, and Saga of Bazor Verria's Gift.

- Now, the four novels are published on several retail outlets including Amazon, Barnes and Noble, Apple, Kobo, Bookshop.org and Smashwords.

#### \*Book Awards

Deb CarverOwens has been an author since 1990 and won just recently in 2024

The Global Book Awards Silver medal in the Science Fiction Romance category for Saga of Bazor the Hunt and in 2025 she won The Global Book Awards Bronze medal in the Science Fiction Romance category for Black Seven: Legend of

Venetta. Also, in 2025, Saga of Bazor Guardian of Secrets won a finalist medal in the category of Science Fiction Adventure from Global Book Awards.

She has a vivid imagination and has also had Legal Secretarial training in a vocational school graduating with a 3.8 GPA. What is the connection? The secretarial lessons helped with the details of editing and the organization of the manuscripts. As other book awards are won, they will be added to this press kit.
