**5 Costly Gas Stove  
Mistakes That Can Cost  
You Thousands — and  
How to Avoid Them**

A Free Buyer Protection Report by Stove-Gas.com

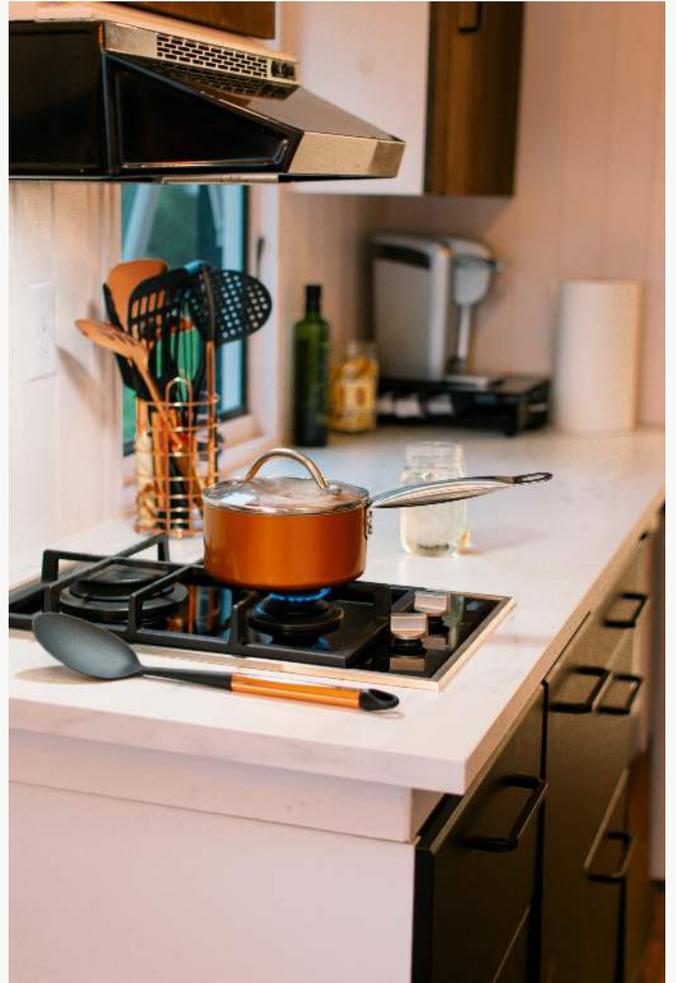

02

# Introduction

Buying a gas stove should feel exciting — not stressful or expensive in hindsight.

Yet thousands of homeowners across the U.S. discover too late that a single wrong decision can cost them thousands of dollars in replacements, renovations, or ongoing frustration.

This report was created to help you avoid the most common (and costly) gas stove mistakes — before you buy.

**03**

# **Why Gas Stove Mistakes Are So Expensive**

Gas stoves are not just appliances — they are permanent kitchen decisions.

Size, fuel type, ventilation, and service access all affect long-term costs.

**04**

# **Mistake #1: Choosing the Wrong Size**

Most kitchens require either a 30-inch or 36-inch gas stove.

Choosing incorrectly often leads to cabinet modifications or full replacement.

**05**

# **Mistake #2: Ignoring Ventilation & Airflow**

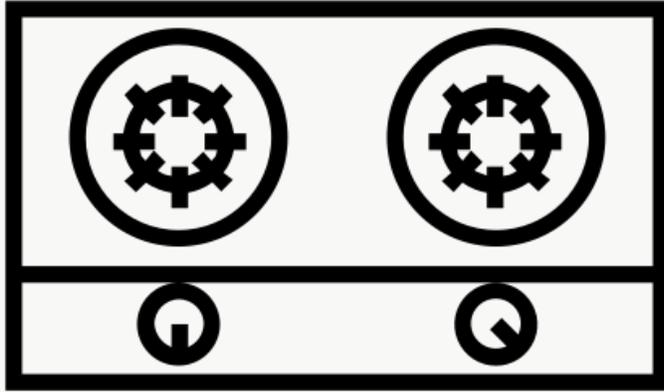

Ventilation is critical for safety and comfort.

Many buyers underestimate hood requirements.

--- PAGE BREAK ---

06

## **Mistake #3: Falling for High BTU Marketing**

High BTU numbers look impressive but can backfire.

Balanced burners offer better control and efficiency.

07

## **Mistake #4: Overlooking Fuel Type & Conversion**

Natural gas and propane stoves are not always interchangeable.

Conversions require kits, labor, and planning.

08

# **Mistake #5: Buying on Price Alone**

Low upfront prices often hide higher lifetime costs.

Service availability matters more than discounts.

09

# A Simple Mistake-Free Buying Checklist

Confirm size, fuel type, ventilation, installation, warranty, and service access before buying.
